Figure S1

Introduction

Figure S1 is a graph of dissolved organic carbon [DOC] vs. microbial mat ash-free dry mass [AFDM] for the four study streams that have a long-term record of microbial mat sampling. None of these relationships were significant (all $p > 0.05$). These results were reported in the main manuscript, but not depicted due to the lack of statistical significance. This figure supports that information.

Figure S1. Relationship between mean annual dissolved organic carbon (DOC) and mean annual ash-free dry mass (AFDM) from streambed samples (all $p > 0.05$) in the four study streams. The plot margins show boxplots of the distributions for AFDM (top margin) and DOC (right margin) for each stream.
