Colorado School of Mines, Department of Geophysics, Golden, Colorado.

23 **Key points:**

- 24 1. Mapping fractures and understanding the reservoir response are the main goals of microseismic  
25 monitoring during hydraulic fracturing.
- 26 2. Distributed Acoustic Sensing provides high spatial resolution of microseismic reflections data.
- 27 3. The proposed fracture imaging workflow uses reflected shear waves in the time-space domain  
28 to map induced fractures in space domain.
