**Figure S1.** The annual mean true surface land and ocean fluxes in nature runs of (a) EXP-biased at  $0.5^\circ \times 0.625^\circ$  resolution and (b) EXP-perfect at  $4^\circ \times 5^\circ$  resolution.

**Figure S2.** The mean surface  $\text{CO}_2$  and column  $\text{CO}_2$  pattern of nature runs at horizontal resolutions of  $0.5^\circ \times 0.625^\circ$  (a, d) and  $4^\circ \times 5^\circ$  (b, e) from January to March. (c, f) The difference between the two nature runs.

**Figure S3.** The mean surface CO<sub>2</sub> and column CO<sub>2</sub> pattern of nature runs at horizontal resolutions of 0.5°×0.625° (a, d) and 4°×5° (b, e) from July to September. (c, f) The difference between the two nature runs.
