

Supplement

Supplemental Fig. 1. Temporal baselines of interferograms used in training, validation, and testing data. Each bar spans the temporal baseline of a single interferogram, respectively beginning and ending at the primary and secondary acquisition dates. (a, b) Ascending and descending interferograms used to prepare data for the northern training area, the southern training area, and the validation area. Interferogram networks (top) are used to derive characteristic ascending and descending displacement signal maps. Short-baseline interferograms (bottom) are used to prepare characteristic atmospheric noise maps. (c) Ascending interferogram network used to test the CNN correction.

Supplemental Fig. 2. Training curve of the convolutional neural network. Mean L1 loss (mean absolute error between the target displacement signal and the predicted displacement signal) is plotted for training (blue, $n = 11,215$ interferograms) and validation data (orange, $n = 1,704$ interferograms) for each epoch. Early stopping was performed at epoch 150 to limit overfitting. Divergence of the training and validation loss curves at epoch ~ 50 suggest challenges in generalizing to unseen terrain.

Supplemental Fig. 3. Validation (A-D) and training (E-H) results for interferograms for a wide range of signal to noise ratio (SNR) values. Each 2D histogram plot shows similarity of corrected and uncorrected interferograms to their target signals (SSIM) vs. the log of interferogram SNR. Gray and black lines represent a centered rolling mean of 25th and 75th percentile and median, respectively for the spread of observed SSIM values at each SNR value ($n=200$ interferograms for each SNR value). All corrections result in an improvement in SSIM over the uncorrected interferograms across SNRs. The CNN correction outperforms the other corrections at all SNRs. Note that for training data, CNN correction performance improves at higher SNRs, while performance of the ERA5 correction and high-pass filtering suffers or is unaffected at higher SNRs. For validation data, SNR does not appear to affect performance of any corrections, which may be related to lower sample size.

Supplemental Table 1. All Sentinel 1 interferograms. Locations refer to areas outlined in Fig. 1.

Index	Product	Track	Location	Primary acquisition date	Secondary acquisition date	Time span
1	target noise	T151A	north training area	20160923	20160929	6 days
